DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-38, drawn to a composition, classified in classes 546 and 548, subclasses 229+ and 530+, respectively.
 - II. Claims 39-49, drawn to a method of inhibiting cholesterol crystal formation, classified in class 514, subclasses 330 and 423+.
 - III. Claims 50-60, drawn to a method of increasing the NO production, classified in class 514, subclasses 330 and 423+.
 - IV. Claims 61-70, drawn to a method of treating arterial and related heart disease, classified in class 514, subclasses 330 and 423+.
 - V. Claims 72-84, drawn to a method of lowering blood pressure and systemic lipid concentrations, classified in class 514, subclasses 330 and 423+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II, III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as that embraced by the invention of Group V.

Art Unit: 1614

3. Inventions I and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as that embraced by the invention of Group III.

4. Inventions II and (III, IV and V) are unrelated. Inventions are unrelated if it can be shown that they have different modes of operation, different functions, or different effects. In the instant case the different inventions each of these groups have different modes of operation and effects and furthermore do not have to be performed together.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. A telephone call to the attorney is not required where: 1) the restriction requirement is complex, 2) the application is being prosecuted pro se, or 3) the examiner knows from past experience that a telephone election will not be made, see MPEP Sect. 812.01.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
